About

Lyra is a front-end to the **Music Player Daemon (MPD)** written in the **Java** language for platform independence. Based loosely on the **Creative Media Source** software, this application has the aim to support large collections of albums and artists.

Another interesting feature about **Lyra** is the implementation of a local cache of the music library. This can lead to a decrease in load time and permits the application to implement features that the host daemon does not inherently support such as ratings.

Third Party Modules

Lyra requires third party elements in order to function excluding the **Music Player Daemon** itself. The following is a listing of elements used in the application itself.

SQLite

Description	SQLite is a software library that implements a self-contained, serverless, zero-configuration, transactional SQL database engine. SQLite is the most widely deployed SQL database engine in the world.

License	Public Domain
Copyright	Nil

Xerial SQLite JDBC

Description	SQLiteJDBC library, requires no configuration since all native libraries for Windows, Mac OS X, Linux and pure-java SQLite, which works in any OS enviroment, are assembled into a single JAR (Java Archive) file.

ICEpdf

Description	ICEpdf is an open source Java PDF library ideal for displaying and printing PDF documents within any Java application. The ICEpdf API is 100% Java-based, lightweight, fast, efficient and very easy to use. ICEpdf is 100% Java-based. ICEpdf is capable of rendering PDFs up to version 1.6 (Acrobat 7.0).

Runtime Software

Runtime software plays a part in the deployment and execution of the application itself. With the exception of Java itself, the components listed below are optional and can be bypassed entirely if required.

Launch4j	Description	Launch4j is a cross-platform tool for wrapping Java applications distributed as jars in lightweight Windows native executables. The executable can be configured to search for a certain JRE version or use a bundled one, and it's possible to set runtime options, like the initial/max heap size.
	Site	http://launch4j.sourceforge.net/
	License	Massachusetts Institute of Technology (MIT) License
	Copyright	Copyright (C) 2004, 2008 Grzegorz Kowal

Java Runtime Engine	Description	Java is general-purpose, concurrent, class-based, and object-oriented, and is specifically designed to have as few implementation dependencies as possible. It is intended to let application developers “write once, run anywhere”.
	Site	http://www.java.com/
	License	Binary Code License Agreement
	Copyright	Copyright (C) Sun Microsystems, Inc Copyright (C) Oracle Corporation

NSIS	Description	The Nullsoft Scriptable Install System (NSIS) can create Windows installers that are capable of installing, uninstalling, setting system settings, extracting files, etc. Because NSIS is based on script files, you can create both simple and advanced installers.
	Site	http://nsis.sourceforge.net/
	License	zlib/libpng license
